

The central strip, with the main granitic-sand track, **guarantees the continuity of the Green Ring**. It is approximately three metres wide and its mostly laid out following the original path. This track is complemented by a second strip, in the form of a **linear lookout** overlooking the city of Igualada. This vantage point is materialised by a 1.2-metre-wide paved strip along the outer edge of the track, directly related to the views. It is built with hard paving, giving the track a strip with improved accessibility.
