## Irrigation Reduction

A drip irrigation system replaces manual watering, ensuring proper hydration for trees and plants while reducing water consumption.

## Water Usage

A misting fountain meets competition requirements while using less water. When off, it serves as a sculptural landmark.

## Sunlight and Protection

Deciduous plane trees provide summer shade while allowing sunlight in winter, making the Firal a year-round social hub.

## Social Interaction

The flexible design includes promenades, a public square, play areas, café terraces, and seating, fostering diverse social interactions.

## Plant Diversity

New native species, including lindens, ashes, and low-growing grasses, increase biodiversity beyond the original plane trees.
