

“PROJECT FOR THE RESTORATION AND MUSEALISATION OF GALAICIAN-ROMAN ARCHAEOLOGICAL SITE IN THE PROVINCE OF PONTEVEDRA”

The proposal takes as its starting point the intrinsic nature of the proposed program: the creation of a space for the preservation of memory in a natural environment chosen as a living place hundreds of years ago. The proposal enhances the apprehension of the natural and archaeological landscape, bringing the observer closer to nature but also to that imagined and projected abstract world, through a non-formal intervention.

As a natural museum, it recreates the memory of landscape through the maintenance, consolidation and recovery of the lost native vegetation.

In order to do this, a guiding proposal, an abstract system composed of different layers, is established with the intention of transferring ad hoc knowledge for each of the sites, integrating them into a unique network for the interpretation of the Galician archaeological landscape.
